SkyView™ Tile

Introducing the SkyView™ Tile by BIOS Lighting.

The Tile represents a new approach to healthy lighting solutions for interior spaces. As humans, we spend 90% of our time indoors, which may seem counterintuitive, especially for those of us living in warmer climates.

Whether you live in the north or south, the amount of time spent outdoors varies throughout the year, leading to most of our lives being spent indoors.

SkyView™ is the only technology on the market today that meets the recommended levels of 250 melanopic EDI in RP46-23 for circadian lighting without using more energy than traditional LED troffers. SkyView™ helps boost mood, alertness, and focus while complying with the most stringent energy requirements demanded by building codes across North America.

SkyView™'s patented Gradient Circadian Optimization (GCO) technology is specifically designed to create an optimal interior lighting formula called application efficiency, which is not achievable by any other lighting solution currently available. SkyView™ achieves the desired circadian effects using less than 70% of the energy compared to other solutions on the market. SkyView™ represents the future of interior lighting, providing true circadian benefits.

- Patented GCO™ (Gradient Circadian Optimization) Technology
- Boosts mood and focus among occupants
- Offers the highest melanopic ratio of lighting on the market today: 1.4 in daytime mode
- 0.4 W/ft² on a 10 x 10 grid
- Volumetric light distribution
- Maintains uniformity ratios of <2:1
